DETAILED ACTION

Information Disclosure Statement

The information disclosure statement (IDS) submitted on 17 October 2003 was filed on the mailing date of the application. The submission is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-17 are rejected under the judicially created doctrine of double patenting over claims 1-17 of U. S. Patent No. 6,662,243 since the claims, if allowed, would improperly extend the "right to exclude" already granted in the patent.

Claims 1-17 are also rejected under the judicially created doctrine of double patenting over claims 1-13 of U. S. Patent No. 6,519,658 since the claims, if allowed, would improperly extend the "right to exclude" already granted in the patent.

The subject matter claimed in the instant application is fully disclosed in the above mentioned patents and is covered by the patents since each of the patents and the application are claiming common subject matter, as follows: a computer memory unit for slidably inserted in a slot connector on a circuit board, the memory unit having a card connector, memory, circuit traces on the card extending from the connector of the card toward the memory and being configured to couple the memory to a power supply via the slot connector, and an optical interface supported by the card and coupled to the memory and being configured to convert electrical signal to optical signals for optical transmission to and from the memory.
